## IPG Rapfast Catering Film (cont'd)

---

**SAFETY:** PVC Film is essentially self extinguishing due to its chlorine content. However, if it is lit, it may evolve hydrogen chloride gas (a corrosive material) so great care must be exercised.

***Ensure that children do not place film over nose and/ or mouth***

**STORAGE:** The film should not be subjected to prolonged extremes of temperature or direct sunlight and should ideally be stored below 20°C. This product is manufactured in roll form and should be stored in an upright position.

**NOTES:**

*\*IPG Rapfast Catering film is NOT suitable for wrapping mushrooms as the anti-fogging agent in the film will cause the mushroom surface to brown where in direct contact with the film.*

*Figures are typical values derived from tests conducted upon actual film samples in accordance with IPG Packaging Test methods. Results may vary, thus this data MUST NOT form the basis limiting specification.*
